

Bug Report

UCSC Student Forum

1. If posts aren't loaded and the user attempts to create a post, the app will crash.
2. Sometimes the posts won't automatically load when you open the app.
3. Can't delete your own posts.
4. Can't delete all posts.
5. App can take a long time to load as database gets bigger.
6. The post loading speed is slow right now.
7. Sometimes when user first double click the map, it would go to a random spot instead of the correct place.
8. If user logs into the account without a profile image, the app will crash.
9. Writing a comment will display the previous comment that was written
10. In the map, when user tries to use 3D touch to open the images, it would not show the picture full screen and lose the functionality of "double-tap to close".
11. When you pin a location near the house, the house pin will disappear.
12. Usernames are currently user UUIDs
13. Email verification sends an email, but does not verify users
14. Creating an account with an email that exists already will crash the app
15. Once filter button is clicked, the text becomes lighter
16. Sometimes users can't sign in with their account
17. Passwords are not hidden when entered into the password field
18. Profile information is set to a blank slate when trying to edit the profile information; the app does not work with what is stored on the database

19. Signing in with empty fields crashes the app

20. Login page shows up over the profile page
