Release Plan

Team: UCSC Student Forum
Team Members: Zeyun Huang, Jason Di Chen, Qianli Zhang, Daniel Chow, Ruihong Yu, Xintong Liu

Product Owner: Xintong Liu
1st Scrum Master: Ruihong Yu

The app we want to build is to create a comprehensive community for UCSC students to share the information that they want to share and to receive, like house rental, ride sharing, or goods trade, etc.

High Level Goals:

Sprint 1:
1. As a developer, I want the user to be able to update their profile with useful information, so that users can have a better experience with the app.
2. As a developer, I want to build a database, so that users can store their information.
3. As a designer, I want to design a convenient user interface, so that users can easily use our app.
4. As a product owner, I want users to be able to register accounts only through UCSC emails, so that the app can have a target audience.
5. As a developer, I want to learn how to use Xcode, so that I can develop the app.

Sprint 2:
1. As a developer, I want the the basic functionalities for the marketplace so users can use the app to help buy and sell items.
2. As a user, I want some basic functionalities for the housing forum so I can find somewhere to live with other people

Sprint 3:
1. As a user, I want to be able to sort, search, and filter items from the marketplace and housing pages to cater the items I view to what I'm interested in.
2. As a developer, I want detailed descriptions and comments to be available on posts to provide a simple way for users to communicate and make more informed decisions.
3. As a user, I want to have a profile page so I can distinguish myself from my peers and provide information to other users who are interested in me or my posts.

4. As a developer, I want the app to have a functional housing feature so users can find housing or roommates. (carried over from last sprint)

Backlog:
1. The APP is going to keep the safety of personal privacy.

   As a developer, I want to design a security methodology to keep our users' private information from unauthorized access.
