Initial Presentation

The structure of the presentation:
Brief introduction to the APP
Architecture of the APP
Sprint 1
Sprint 2
Sprint 3
Challenges and risks to the project
Technology we will use in the project

For the introduction:
It is about how we will implement functionality when creating the APP

Sprint 1:
At this period of time, we are looking for building the basic database, user interface, and debugging the technical issues.

Sprint 2:
For the second sprint, we look forward to refining the interface with more elaborate and comfortable icons and images, and a mostly-done APP that is functional.

Sprint 3:
In the last sprint, after finishing the relatively easy functions for the APP, we are going to apply more complex functions into the APP like GPS.

Final anticipation:
In the final conclusion, we would show examples of real-world situations where people would like to use the APP and how our idea could solve those inconveniences.
